WORK EXPERIENCE

Senior Software Engineer, Liberty Mutual Insurance

APR 2023 - PRESENT

- Built AI agent workflow to autonomously remediate sales representatives' Triton audio issues using Moveworks platform, allowing those employees to immediately return to handling sales calls without the need for human intervention; thereby, boosting sales engagement, freeing up Tech Support to handle more complex problems, and improving employee efficiency.
- Developed end to end Tech Support AI Agent Assistant feature on Agent Workstation Management (AWSM) platform, using React deployed to OCF, and Node deployed to AWS Lambda, enabling Tech Support employees to have a AI sidekick help them troubleshoot employee reported technical issues; thereby, improving the effectiveness and efficiency of Tech Support employees.

Software Engineer, Liberty Mutual Insurance

MAR 2020 – APR 2023

- Implemented end to end ticketing service on HelpHub platform, using React deployed to OCF, and Node deployed to AWS Lambda, enabling employees to specify the application/platform/system they are struggling with, along with specific details of their issue and having their ticket be routed to the appropriate queue; thereby, reducing tickets needing to be forwarded to the correct support team, speeding up time of getting tickets to resolution.
- Developed end to end the employee device procurement service on HelpHub platform, using React to OCF, and Node deployed to AWS Lambda, enabling employees to request the device, peripherals, and accessories they need to perform their job. I built the three step user interface from selecting items to entering address to review page. I also built the automated email system to send emails to employees for successful orders, to managers for approvals when necessary, and to device deployment team for backlog of approved orders to be processed.

Software Engineer, Cerner Corporation

JAN 2019 – FEB 2020

- Built dashboards using React deployed to PCF and Spring Boot deployed to on-prem servers, enabling our clients to view detailed patient insurance information and to quickly search for procedures that the patient is eligible for.

Software Engineer, Rudraya Corporation

AUG 2018 – DEC 2018

- Built document search functionality for Sonic 2.0 product, using HTML, CSS, JS and Flask deployed to AWS EC2. Sonic is a document management platform that scientists who work for our clients use to store work related documents.

EDUCATION

Master of Science, Computer Science, Arizona State University

FEB 2024

Bachelor of Science, Computer Science, Rutgers University

JAN 2019

CERTIFICATIONS

AWS Solutions Architect Associate

VALID APR 2026 - APR 2029

PROJECTS

Sales Email Scribe

[URL: <https://sales-email-scribe.onrender.com> | Code: https://github.com/benyan8211/sales_email_scribe]

- Built Django web application with PostgreSQL database, deployed on Render, to assist Sales teams draft the perfect sales email for their upcoming sales campaign using AI.
- Developed Login and Signup page, complete with user account activation via email.
- Implemented a simple, easy to use intake form to gather important information about the company, the product/service, and any important details.
- Integrated the OpenAI Agents SDK to draft and continuously refine the sales email based on user feedback until the user is completely satisfied.
